This sequence represents the C-terminal domain of a ligand binding region of a human granulocyte colony stimulating factor (G-CSF) receptor. This sequence, the corresponding mouse sequence (see AAT33515), or a conserved fragment of both these sequences (see AAT33517) can be used in an expression vector for the production of the receptor. The sequences can also be used in an expression vector containing E.coli maltose binding protein to produce a fusion protein. The DNA can be used in the study of diseases related to the interaction between the G-CSF receptor and its ligand, as well as for the treatment or prevention of G-CSF receptor. G-CSF-dependent diseases and abnormalities. The recombinant ligand-binding region produced, is physiologically active and can be used in the study of the G-CSF receptor, such as analysis of its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   92.0%; Score 13.8; DB 17; Length 639; 80.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel method (A) of inducing differentiation of a bone marrow stromal progenitor cell to an osteoblastic lineage is new and comprises contacting the bone marrow stromal progenitor cell with an amount of leptin or its analog. The products of the invention have osteopathic activity. The method is useful for inducing differentiation of a bone marrow stromal progenitor cell to an osteoblastic lineage and for inducing bone formation in mammals. Therefore the method is useful for the treatment of osteoporosis and other conditions where bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      formation is required. This sequence represents a PCR primer used in the amplification of human OB-R variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Granulocyte colony stimulating factor; G-CSF; C-terminus; mouse; human; ligand binding domain; E.coli; maltose binding protein; receptor; G-CSF-dependent disease; G-CSF abnormality; ss.

                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                          5 Degenerate hybridisation probes (AAT17870-74) are based on a conserved motif (AAR92812) found in haemopoietin receptors. The probes are used in the identification and/or cloning of genes coding for novel haemopoietin receptors, e.g. the murine interleukin-11 (IL-11) receptor alpha chain gene (AAT17868). Such receptors are defined by their ability to hybridise to the probes under medium stringency conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Oligonucleotide HYB2 hybridises under medium stringent conditions to a novel DNA (see AAT64442) encoding human haemopoietin receptor NR2 (AAW14841). It was used in the isolation of a partial NR2 sequence from a CDNA library constructed from the bone marrow mRNA of a patient recovering from chemotherapy. NR2 and genetic sequences encoding it can be used in the development of (ant)agonists, therapeutics and diagnostic reagents based on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human haemopoietin receptor NR2, and corresponding DNA - used e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     molecules encoding a novel haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Haemopoietin receptor; cell proliferation; cell differentiation; cancer; cell survival; therapeutic; neuronal proliferation; drug screening; ss;

The CDNA library to be analyzed within the framework of this project was created using a Botrytis cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant. The library was produced in an oriented direction, in the pBSII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission

The cDNA library to be analyzed within the framework of this
project was created using a Botrytis cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant:
The library was produced in an oriented direction, in the pBSII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission Submitted (01-SEP-1999) Genoscope - Centre National de Sequencage : CP 5706 91057 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr - Web : www.genoscope.cns.fr) The cDNA library to be analyzed within the framework of this

The cDNA library to be analyzed within the framework of this project was created using a Botrytis cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant. The library was produced in an oriented direction, in the pBSII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                               Soluble human prolactin receptor (hPRLR) isoforms have been isolated from the human gastrointestinal tract. The isoforms have a deletion in the extra- or intracellular domain and are thought to be generated by alternative splicing, since four clones (A. B. C and E) precisely lack one or two exons. Except for clone C, the deletion in all other clones resulted in a frameshift and produced a stop codon before the transmembrane domain. The soluble hPRLR may be used as a binding protein for human prolactin and/or human growth hormone, which can be used in diagnostics for the detection and measurament of the binding ligand or in the rappeutics for binding to human prolactin and/or human growth hormone to retard or inhibit their hormone activities. They may also be used in the ceptor and inthodies to provide solution-based radioligand receptor assays, in receptor sandwich or enzymatic assays, and in X-ray crystallographic analysis to develop molecular models, which define the certiary structure of the hormone-binding domains, where such information would provide insight into the structure of the actual contact between a hormone and its receptor. This structure information would be useful in the design of peptides which have prolactin or growth hormone-like
                                                                                                                                                                                                                                                                                                              New soluble prolactin receptors useful as human growth hormone binding protein and in x-ray crystallographic analysis for developing molecular models which define the tertlary structure of the hormone-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

The present sequence is that of DNA encoding a newly identified soluble isoform of the human prolactin receptor (PRLR). The DNA lacks exons 5 and 6 of the full-length receptor, resulting in a lacks exons 5 and 6 of the full-length receptor, resulting in a saking the putative protein product (see AAY95524) a secreted form of the receptor. 6 Isoforms (see AAA997682) of human PRLR were identified in human colonic Cacco 2 and human breast cancer T-47D cells. Recombinant DNA molecules encoding the soluble PRLRs are provided, as well as expression vectors and host cells. The soluble PRLRs may be used as binding proteins for human prolactin and/or human growth hormone, which can be useful in diagnostics for the detection and measurement of the binding ligand, or in therapeutics for binding to human prolactin and/or human growth hormone activities. They may also be used in place of inhibit their hormone activities. They may also be used in place of inhibit their hormone activities. They may also be used in place of inhibit their hormone activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA having a segment encoding a signal peptide joined translationally to a segment encoding a soluble human prolactin receptor useful as a hormone growth hormone binding protein, and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor assays, in receptor sandwich or enzymatic assays, and in x-ray crystallographic analysis to develop molecular models that define the tertiary structure of the hormone-binding domains, where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such information would provide insight into the structure of the actual contact between a hormone and its receptor. This structural information would be useful in the design of peptides that have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               prolactin or growth hormone-like agonistic or antagonistic activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NRB genes. The NRB family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAX59268-559300 and AAX290816-290925 represent specific examples of probe sequences used in the search. Antibodies to the NRB family proteins are used for the diagnosis of blood formation disorders. Compounds identified

AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of chlamydia pneumoniae (see AAX91940). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema endosum or pharynquitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34581-Containing C. pneumoniae nucleotides sequences containing C. pneumoniae, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                     Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hPRLR; soluble; prolactin receptor; gastrointestinal; splice variant; binding protein; prolactin; growth hormone; agonist; antagonist; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 20;
PCR primer used to amplify an ORF of Chlamydia pneumoniae.

the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences Assasses 8:59300 and AA290816-290925 represent specific examples of probe sequences used in the search. Antibodies to the NRB family proteins are used for the diagnosis of blood formation disorders. Compounds identified
                                                                                                                                                as binding to the proteins are used for the treatment of such disorders.
                                      The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hemopoletin receptor protein family NRB used for diagnosis of blood

                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                      The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYINNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AALS9258-259300 and AA290416-290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

```
The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NRB genes. The NRB family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AALS928B-259300 and AALS9016-290925 represent specific examples of probe sequences used in the search. Antibodies to the NRB family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 15 BP; 3 A; 1 C; 7 G; 4 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        o;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZS9288-259300 and AAZ9016-290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
sequences used in the search. Antibodies to the NRB family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAAS9258-259300 and AAS90816-290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                            · :
                                                                                                                                                                                                                                                The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAAS9258-259300 and AAS90816-290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.

                                                                                                                                                                                      The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NRB genes. The NRB family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAX59258-S59300 and AAX290216-S29300 acid sequences have an in the search. Antibodies to the NRB family proteins are used for the diagnosis of blood formation disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser. The sequences AAZ59258-Z59300 and AAZ90816-Z90925 represent specific examples of probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
Hemopoietin receptor protein family NR8 used for diagnosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hemopoletin receptor protein family NR8 used for diagnosis of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 15;

              The invention relates to the isolation of sequences encoding human haemopoletin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYINNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ$258~259300 and AAZ$00816~290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified as binding to the proteins are used for the treatment of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the isolation of sequences encoding human haemopoietin receptor protein family NR8 genes. The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAZ59288-259300 and AAZ990816-290925 represent specific oxamples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified

The NR8 family sequences were initially searched for comparison on a nucleic acid database with the nucleic acid probe sequence TGGAGYNNNTGGAGY encoding the amino acid sequence Trp-Ser-Xaa-Trp-Ser. The sequences AAA259258-259300 and AA29016-290925 represent specific examples of probe sequences used in the search. Antibodies to the NR8 family proteins are used for the diagnosis of blood formation disorders. Compounds identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as binding to the proteins are used for the treatment of such disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOURCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ORIGIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δλ
                                                                                                                                                        (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase act and polymerase and T4 polymerase act and T4 polymerase act and T4 polymerase act and T4 polymerase to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (qi|4732114qb|AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tel: 81-298-36-9145
